Job Market Paper

Trade-induced Credit Shocks and the Size of Productive Firms

- Abstract: Trade shocks can potentially limit the expansion of high-productivity firms through spillovers to the banking sector. Looking into import competition in India, I construct an industry-level measure of trade-induced credit shocks between 1998 and 2007. I find that trade-induced credit shocks reduce sales more for high-productivity firms. This heterogeneous effect is particularly pronounced among small and young firms. The findings highlight the importance of accounting for the financial transmission of trade shocks and the potential vulnerability of productive firms to financial disruptions.
